BrokerManager 2007™

next generation brokerage back office management

BrokerManager™ is scalable.

With the "Open Gateways" we've built within **BrokerManager™**, combined with the technical architecture the system is built on, you don't have to worry about outgrowing your brokerage system in the future.

BrokerManager™ is customizable.

A modular structure and customizable screens and fields make it easy to tailor this system to your unique requirements.

BrokerManager™ is easy to use.

A consistent graphical user interface that enables fast data entry, dynamic reporting, and easy navigation.

BrokerManager 2007™ is a multi market, multi language, and multi currency enterprise application for today's brokerage and accounting needs.

With **BrokerManager 2007™**, every department of your business can be more productive and more interdependent, because **BrokerManager 2007™** works as the accounting and brokerage foundation for a whole set of integrated end-to-end solutions.

BrokerManager™ was introduced in 1998 as the first brokerage back-office application in the region. Since then, continuous research and enhancements resulted in today's third generation of brokerage back-office;
BrokerManager 2007™.
